

Albert Park Pit Building redevelopment

Start of early works and upcoming tree removal

4 May 2025

Our contractor, Icon Construction, will be starting early works at the site of the current pit building to ensure it is ready for major construction to begin after the 2026 Formula 1 Australian Grand Prix.

Footpath access

Footpaths to the east, north, and south of the construction site will be closed as required to allow for site setup and pre-construction services upgrade works.

Pedestrian access

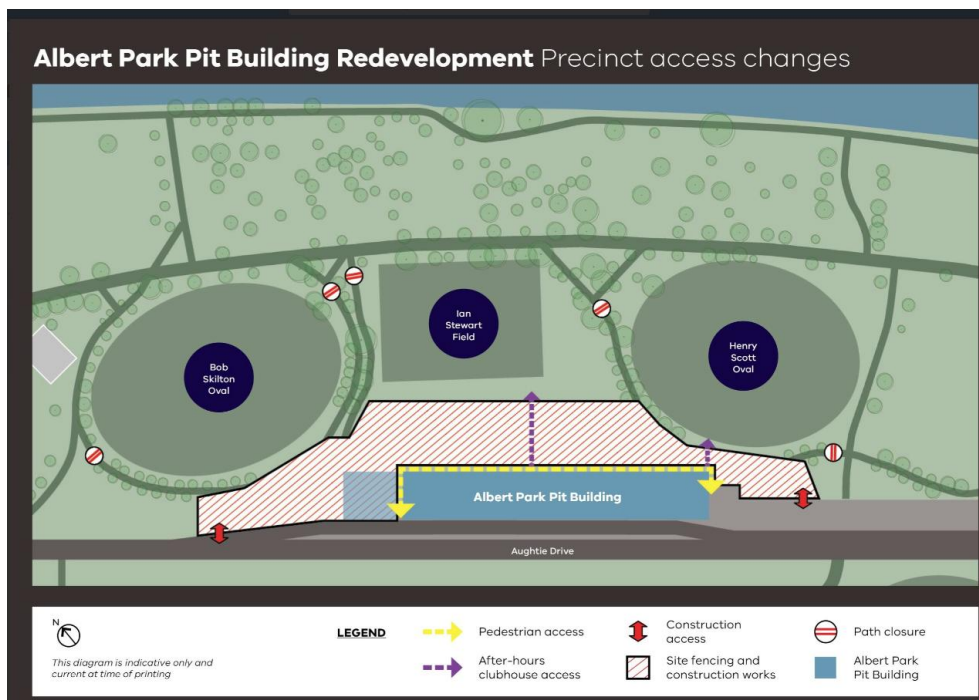

Access to the current pit building will be maintained, with clear signage in place to divert pedestrians around the construction site.

We will work closely with our contractors to minimise any disruptions for park users.

Traffic management measures

Measures such as traffic controllers, signage, and bollards will be used to direct traffic around the site. Worksite exclusion fencing, and bollards will also be used to control hazards at the worksite.

Please take note of the changed traffic conditions if you drive in through the park.

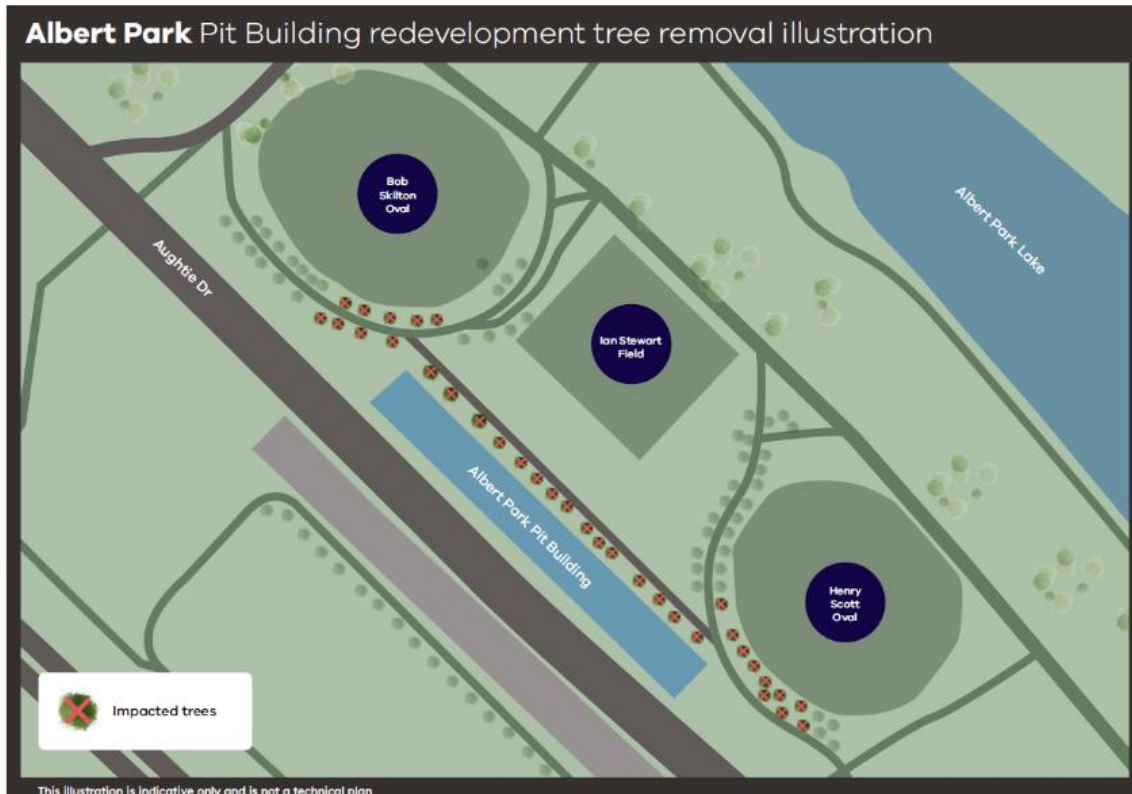

Tree removal

To support the Albert Park pit building redevelopment project, an arborist report has identified trees for removal to allow for the construction of the new building.

The maximum number of trees that will be removed is 34, however a review is being undertaken seeking to reduce this number.

The image below indicates the maximum number of trees that could be removed. It is anticipated that a total of 120 trees will be replanted around the new building and the wider park.

The tree removal will occur throughout July 2025.

The trees are exotic Yunnan Poplars as well as some Australian Spotted Gum, and exotic Callery Pears.

Our contractors will implement tree protection measures such as fencing and signage to the remaining trees in the area during construction.

As part of our commitment to sustainability, we will be working closely with Parks Victoria to ensure we maintain and enhance the natural landscape in Albert Park through the replanting of trees around the new building and in the nearby parkland during the project.
