

April 2024

Riverwalk Estate: Construction update

Development Victoria is the Government agency responsible for the 197-hectare residential development situated along Geelong Road in Werribee, known as 'Riverwalk'.

As part of our preparations for the delivery of future homes at Riverwalk, we are progressing with earthworks and civil works in the north-western corner of the site, adjacent to Farm Road.

Managing the works

To manage these works, we have implemented enhanced dust suppression measures.

These include the installation of geofabric matting on a large topsoil stockpile near Farm Road (see image below), the operation of three water carts during works, and implementing a new plan for extreme weather days, including halting work when conditions become unmanageable.

Additionally, we have installed dust monitors around the site perimeter to monitor daily dust levels.

Future Prevention Measures

After works are complete, we plan to hydroseed completed nature strips to facilitate grass growth, binding the topsoil to further prevent the spreading of dust.

Compliance and Safety

As a standard process, WorkSafe recently inspected the site and confirmed it meets all necessary construction site management requirements.

Timing

Major earthworks and civil works are progressing in stages in the north-western corner of Riverwalk, which is between Farm Road and Geelong Road (see map below). The earthworks are due to finish up at the end of April 2024, weather permitting.

All civil construction works in the area should be finished by the end of 2024. After that, the land will be ready for future home construction.

Get in touch

For further information, please email Riverwalk.Enquiries@development.vic.gov.au, and a team member will promptly respond to your inquiry.

We apologise for any inconvenience caused to local residents and remain dedicated to minimising impacts in collaboration with our contractor.
